Leadtimes and availability:

All our products in this brochure should be available within a regular leadtime, but it can vary depending on the product.

MTO Products

Products which have the **MTO** label next to them are "made to order" so the MOQ (minimum order quantity) can be higher and leadtime can be longer.

Experience sustainability in everything we do.

Give your customers extra reasons to love your brand, with a packaging range that loves the planet. With our sustainable product range, you can responsibly package your delectable food and beverages, bolstering your brand's sustainable reputation.

Sustainability is an integral part of our functions that combine environmental protection, social justice and economic efficiency.

By combining our packaging expertise and our renewable, recyclable and compostable material base, we can meet a wide range of requirements for environmentally optimal packaging.

We take every opportunity to be at the forefront of technology, materials research and new product development. Our sustainable product launches offer added value for our customers and society. We specialize in sustainable, forestry-certified fiber-based packaging with little or no plastic content and predominantly PFAS-free materials.

The path to reducing your environmental footprint is remarkably clear. Whenever possible, our food packaging products are crafted from **plant-based materials**. This assures your customers that your food packaging hails from **sustainable and conscientious sources**, providing them with peace of mind. Within our assortment, you'll discover products **recyclable or compostable**, adding to your customers' satisfaction.

TERMINOLOGY

Recyclable:

These products can be reprocessed, and the resulting material is manufactured into new products.

Renewable:

Made from natural resources which replenish to overcome resource depletion caused by usage and consumption, either through biological reproduction or other naturally recurring processes.

Industrially Compostable:

These products can be composted in an industrial composting facility, which is a place where the perfect balance of heat, moisture, and oxygen is created to break down organic and plant-based materials.

Home Compostable:

These products can be placed in a home compost bin where they will decompose naturally within a period of time into the soil.

PREMIUM PRODUCT RANGES - SUSTAINABILITY IS KEY

BIOWARE™

Manufactured using fiber or paper from renewable sources and are industrially compostable according to EN13432.

Made from 100% plant-based, renewable raw materials. The coating of these Bioware™ products, is made from a biopolymer, fully industrially compostable and certified in accordance with DIN EN 13432. Free from genetically modified substances. They are industrially compostable and recyclable (where facilities exist).

Our generic range comes in an attractive, environmentally friendly design and are made with 100% PEFC certified paper board (PEFC 04-31-3330).

With these articles you make a strong statement about the environmental awareness of your brand and satisfy the growing demand for "green" products.

FUTURE SMART™

Our Productrange made from renewable materials with a Future Smart™ plant based coating.

100% renewable plant based lining (made from vegetable oils).

No fossil based materials. (They contain no carbon content older than 100 years as verified by the 14C carbon dating method.) They are highly pulpable and recyclable via existing waste-streams.

Our generic range Future Smart™ items come in a design that communicates sustainable values and are made with 100% PEFC certified paper board. (PEFC 04-31-3330)

INTRODUCING OUR NEW LOWER PE COATING SOLUTIONS

NEW

With a minimum of 95% fiber content by product weight for hot and cold cups, we are able to offer products which contain less than 5% polymer content. Our lower plastic products are highly pulpable and recyclable via existing waste-streams.

Sustainable Sourcing:

Raw materials sourced from sustainably managed PEFC certified forests. Proud to support sustainable sourcing and the principles of the EU Timber Regulation. No 995/2010

All of our paperboard products are made with 100% PEFC certified paper board (PEFC 04-31-3330). Wooden cutlery from FSC-certified, sustainably managed forests (FSC paperboard can be used on request).

Plastic Free:

These products do not contain any plastic.

No intentionally added PFAS:

Our packaging offers advanced grease resistance without intentionally added PFAS.

A man and a woman are standing outdoors, smiling and looking at each other. The man is wearing a black bowler hat, a dark blazer over a black and white striped t-shirt, and light-colored trousers. He is holding a white cardboard tray with two disposable coffee cups, one red and one orange. The woman is wearing sunglasses, a dark floral patterned dress, and has her hair styled in waves. The background is a blurred outdoor setting with green foliage. The text "Hot cups" is written in a large, white, cursive font across the center of the image.

Hot cups

Cozy up with comfort.

CUPS, LIDS & ACCESSORIES

From freshly brewed coffee to creamy hot chocolate, we have the right products for you. Whether your customers are drinking at home, at work or on the go, our hot cups and lids are the right packaging for your products, wherever they are enjoyed.

We have the best cups for you to serve your most delicious hot drink. You will find the right sizes for your needs in our range. From espresso to tall lattes, we have the perfect cup. You can even have the mugs printed with your own design.

Our single-walled cups are best suited for everyday use. If you want more insulation or shine, take a look at our double-walled cups. For customers who want a coffee or other hot drink to go or delivered to their home, our double-walled cups offer an optimal S-corrugated design for improved insulation; no separate sleeve is required. This saves cost and space and reduces the number of SKUs. Most importantly, they have 25% less material compared to competitors' smooth-walled and triple-walled tumblers.

With a variety of matching lids for on-the-go, including our new fiber lids as an alternative to plastic, you're all set. Whether you're serving in a restaurant, takeaway or delivery service, we have the perfect solution.

REASONS YOU'LL LOVE IT

**Our cups are produced and used locally
which reduces emissions from freight.**

Lighter vending machine cups, run-proof and dimensionally stable.

HUHTAMAKI'S CONVENTIONAL PLASTIC PRODUCTS ARE FAR FROM CONVENTIONAL.

Thermoforming heats materials such as polystyrene (PS) and polyethylene terephthalate (PET) as well as recycled PET into films. Pressure and a vacuum are used to mould these raw materials into the desired shape. If the packaging produced in this way is recycled, the process can easily be repeated using the same raw materials.

As part of the continuous optimisation of our range, we have not only focussed on the needs of operators and consumers with our cups, but have also placed great importance on the sustainable use of our environment.

PS Thermo Vending Cups - Light Version

- Weight reduction ~23% = Cost reduction (less licence fees)
- Lower environmental impact
- Conservation of resources
- Reduced CO² emissions
- High functionality due to optimal material distribution
- Dimensionally stable

Cold Cups

Beat the heat - refresh yourself.

COOL DOWN WITH STYLE

Shakes, smoothies, iced coffee mixes and cold drinks are served in style with our wide range of clear plastic cups and lids for cold drinks. We produce a wide range of clear plastic cups for cold drinks in PET/ RPET, PLA, PP and PS. Our cups and lids are available in different sizes and shapes. Clear lids with high clarity add to the convenience when carrying the drink around.

Our cold drink cups are available in a range of attractive designs or can be customised with your own design or logo. Combined with the cold cup lids, you can enjoy cold drinks on the go.

INNOVATIVE PACKAGING

Made from rPET, a material derived from recycled PET bottles, they are recyclable, offer excellent clarity and are also crack-resistant.

BioWare™ cold drink cups and the matching lids offer the same handling functionality as products made from traditional plastic. Due to the natural material properties, the cups are suitable for use up to 40° C. Our cups have natural origin, as they are made from renewable resources and fulfil all requirements in terms of functionality, appearance and hygiene.

With our BioWare™ range, we are pioneers in the field of compostable packaging. The BioWare™ cold drinks cup was the first of its kind. BioWare™ cups are made from the renewable Ingeo-PLA material, which is fully compostable in industrial composting facilities.

Our products are used by the world's leading foodservice and beverage brands and are recognised for their quality and ease of use.

BioWare™ PLA Cold cups and lids

- BioWare™ cold drinks cups and the matching lids offer the same handling functionality as products made from traditional plastic. They are crystal clear, shatterproof and ideal as packaging for cold food and drinks.
- Our ecological disposable cups and ideally suited for cold beverages of any kind (due to the natural material properties, the cups are suitable for use up to 40° C).
- Our cups have natural origin (PLA made of lactic acid from sugars of maize starch) and fulfil all requirements in terms of functionality, appearance and hygiene.

PS Party Cups

The red party cups are very popular in the USA. The trend has now also arrived in Europe. The cups are becoming increasingly popular. Due to the great demand, our famous party cups are now also available in the special colours blue and white.

- Modern look thanks to embossed rings.
- More stability of the cup.
- MID-certified filling lines 200 ml and 400 ml.
- MID certification enables use not only at private parties, but also at public events.
- The 3 marked levels of the party cup provide support in terms of functionality, appearance and hygiene when mixing cocktails.

Food Containers

Served in style.

FOOD CONTAINERS AND TRAYS

Daily routines and consumer behaviours have changed, particularly the ordering, collection or delivery and consumption of meals and drinks. This has led to the introduction of new and evolving service models.

Packaging is instrumental in delivering the latest menus, drinks and treats to consumers. The functionality of the packaging is vital to enable excellent service as well as maintaining the all important quality of the food within.

Our versatile kraft, fiber-based food boxes and trays are perfect for hot and cold meals or snacks. For serve over, hot cabinet, takeaway and delivery use. Our widespread material base and manufacturing capabilities means our range comprises different fiber based solutions.

The right kind of food packaging attracts and makes the meal enjoyable.

REASONS
YOU'LL LOVE IT

Fiber based packaging communicates sustainable values.

Burger & food boxes

Our one-piece fluted burger and food boxes provide excellent thermal insulation, keeping the product hot for longer (Ideal for use at the counter, for takeaway and for delivery service). A grease-repellent layer of packaging prevents the penetration of liquids into the cardboard packaging (dimensionally stable - light, strong and firm).

Our improved design has greater functionality and is made without plastic components. Microwave and oven safe up to 220°C for 30 minutes, burgers and patties can be cooked or reheated directly in the box. As the size of burgers has increased over the years, the height of our burger box is ideal for gourmet burgers.

Kilo trays

Introducing the fiber kilo trays, our new containers suitable for a variety of hot and cold meals and takeaway solutions. Suitable for reheating in a domestic microwave, water and oil resistant, suitable for all types of food: cold and hot, moist and fatty.

The full range is available in seven different sizes, including 1- and 2 compartment trays. To complete these trays, there are 2 options of lids available.

Snack Trays

- Made from renewable plant based fiber materials (natural bagasse fibers).
- Sustainable & environmentally friendly.
- They provide a variety of new solutions, which are sustainable alternatives for commonly used food packaging products and replace standard PS and EPS takeaway packaging.
- High quality & functional.
- Recyclable (where facilities exist).
